EXAMINER'S AMENDMENT

7. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. David Boundy, applicant's attorney on 7/9/04.

The application has been amended as follows:

- (i) In the specification, the abstract has been replaced by the following abstract.

-- An instruction processor to execute two instruction sets. Instructions are stored in different virtual memory pages of a single address space, and are coded for computers of two different instruction sets, and use of two different calling conventions. The instruction processor interprets instructions under, alternately, the first or second instruction set as directed by a first flag stored in table entries corresponding to memory pages for the instructions. The processor recognizes when program execution has transferred from a page of instructions using the first

data storage convention to a page of instructions using the second data storage convention, as indicated by a second flag stored in the table entries, and then adjusts a data storage content of the computer from the first storage convention to the second data storage convention. A history record provides a record of a classification of a recently-executed instruction. --

REASON FOR ALLOWANCE

8. The following is an examiner's statement of reason for allowance:

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, control-flow instruction of the instruction set being classified into a relatively small plurality of classes relative to the number of instruction opcodes executable by the instruction pipeline, most divisions in the classification being based on a static encoding of control-flow instructions executed, with at most minor divisions in the classification being based on dynamic or data-dependent execution behavior, as recited in the independent claim 1.

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, during execution of a program on a computer, as part of the execution of instructions of the instruction set, updating a record of the class of the classified control-flow instruction most recently executed, as recited in the independent claim 6.

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, a method before executing the destination instruction, reconfiguring the storage state of the computer to reestablish under the second execution context the logical state of the computer as interpreted under the first execution context, as recited in the independent claim 13.

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, a storage register designed to store, and circuitry designed to record without software intervention into the storage register, a value reflecting the class, from among the encoding based classification, of an instruction recently executed by the pipeline, as recited in the independent claim 24.
